

Please allow satellite radio to broadcast what they want to. I no longer have to listen to the drivel on public radio. no commercials and no politically slanted programs. weather and traffic allows travelers to keep abreast of the changing conditions in what ever city they may be in. I pay for the satellite service and do not appreciate someone telling me what I can and can't listen to.let the national association of bradcasters police themselves and stop worrying about something they should never, ever, have any control over.StevenHayes
